Task Analysis

Task Analysis is the process of breaking down a user's interactions with a system into smaller, structured steps to understand how users achieve their goals. It helps identify user behavior, decision points, and system responses during task completion.

In this exercise, the task analyzed is completing a purchase in an online shopping application with payment failure handling.

Key Aspects of Task Analysis

- Understanding user actions during shopping
- Identifying sequence of steps in checkout process
- Handling payment failure scenarios
- Improving user experience through retry mechanism

User Flow

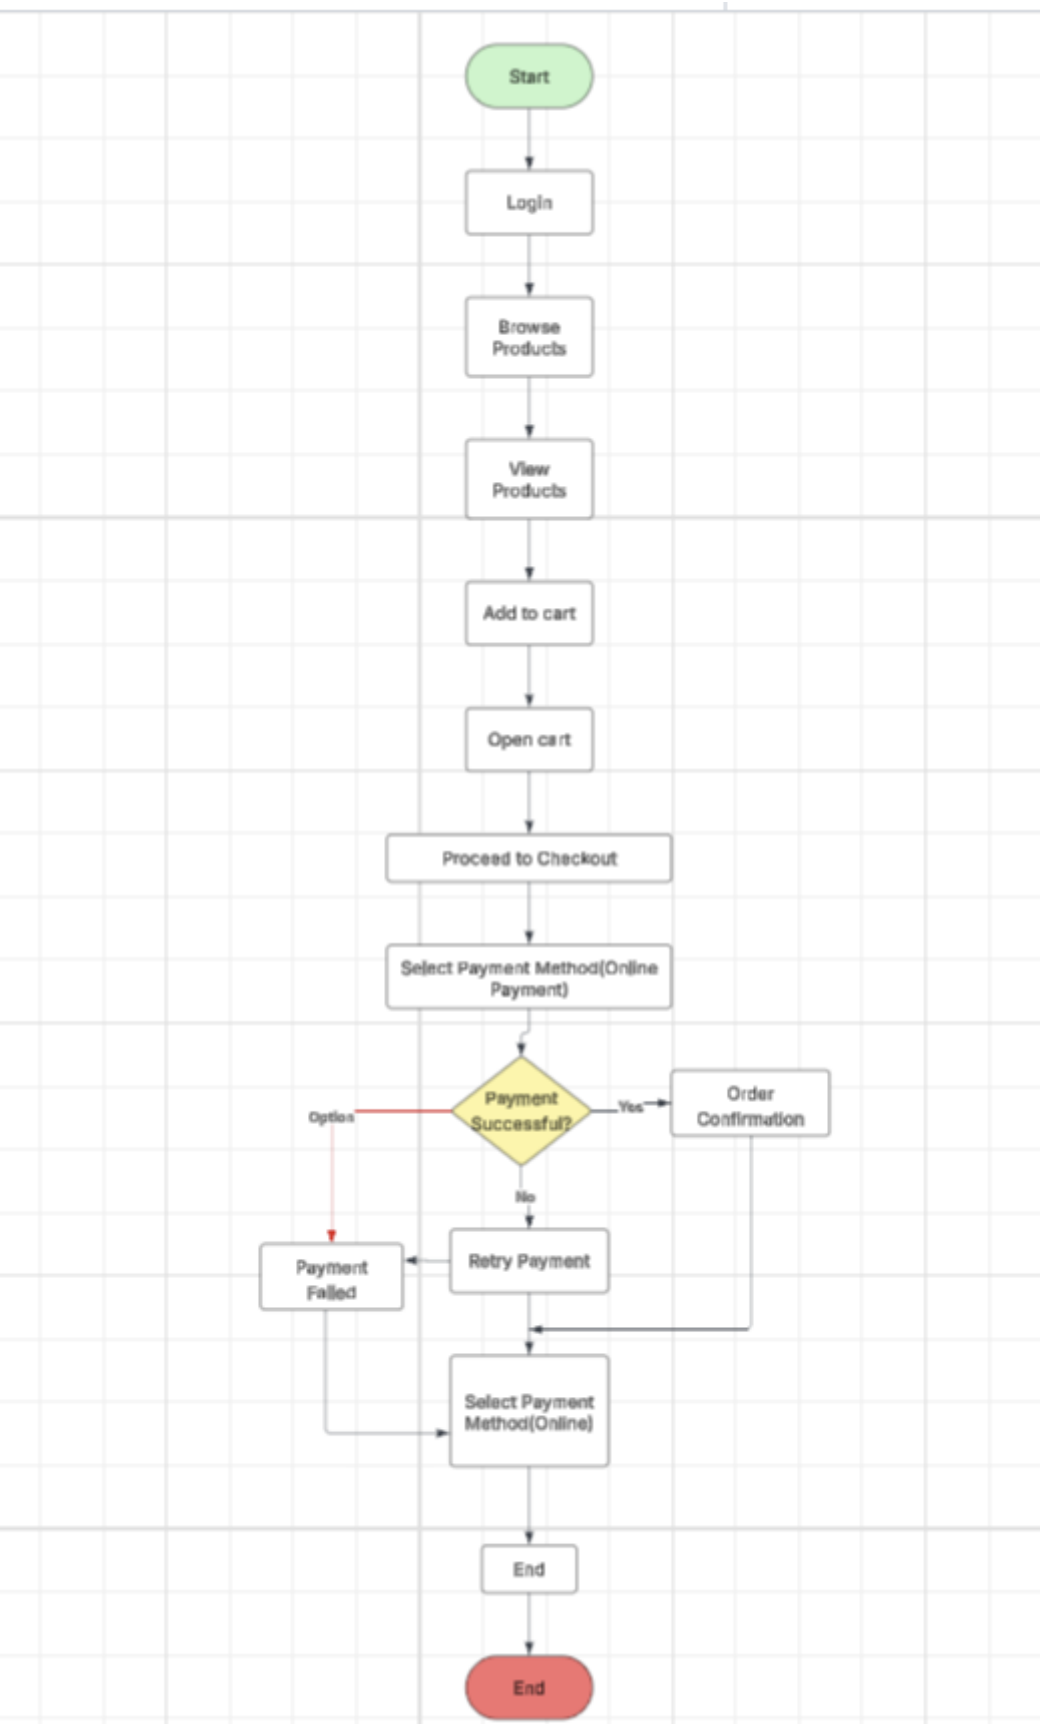
User Flow is a visual representation of how users navigate through an application to complete a specific goal. It shows the decision-making paths and alternate routes a user may take.

In this scenario, the user attempts to complete a purchase but encounters a payment failure and retries the payment.

User Flow for Payment Failure & Retry Scenario

Start → Login → Browse Products → View Product → Add to Cart → Open Cart → Proceed to Checkout → Enter Shipping Details → Select Payment Method (Online) → Payment Successful? → (Yes → Order Confirmation → End) / (No → Payment Failed → Retry Payment

→ Select Payment Method)



Step-by-Step Explanation

Step 1: Start

• The user opens the e-commerce application.

Step 2: Login

• The user logs into their account to continue shopping.

Step 3: Browse Products

• The user explores available product categories.

Step 4: View Product

• The user selects a product to view details such as price, description, and availability.

Step 5: Add to Cart

• The user adds the selected product to the cart.

Step 6: Open Cart

• The user reviews items added to the cart.

Step 7: Proceed to Checkout

• The user chooses to continue with the purchase process.

Step 8: Enter Shipping Details

• The user provides delivery address and contact details.

Step 9: Select Payment Method

• The user selects online payment as the payment method.

Step 10: Payment Successful? (Decision Point)

• The system checks whether the payment is successful.

If YES:
• Order confirmation is displayed.
• The process ends successfully.

If NO:
• Payment failure message is shown.
• User is given option to retry payment.
• User reselects payment method and attempts payment again.

Step 11: Order Confirmation

• After successful payment, order confirmation message is displayed.

Step 12: End

• The purchase process is completed.

✅ Result

Successfully conducted task analysis and created a user flow diagram representing the payment failure and retry mechanism in an online shopping application using Lucidchart.
