EXPERIMENT – 6

Designing App Layouts and Color Schemes using GIMP

AIM

To design and experiment with different app layouts and color schemes using **GIMP**, and to evaluate user feedback based on aesthetics and usability.

SOFTWARE USED

- **GIMP**
- Google Forms / Microsoft Forms

PROCEDURE

Step 1: Installation

- Downloaded and installed GIMP from the official website.
- Launched the GIMP application.

Step 2: Create New Project

- Opened GIMP → File → New
- Set dimensions to **1080 × 1920 pixels** (mobile screen size).

Step 3: Design Base Layout

- Created sections using Rectangle Select Tool:
    - Header
    - Content area
    - Footer
- Used Bucket Fill Tool to apply base colors.

- Added UI elements:
    - Username and Password fields
    - Login button
    - Labels and icons
- Organized elements using layers for easy editing.

Step 4: Create Color Variants

Three different UI designs were created:

1. Light Theme

- Light grey background with white card
- Blue colored buttons
- Clean and simple layout

2. Dark Theme

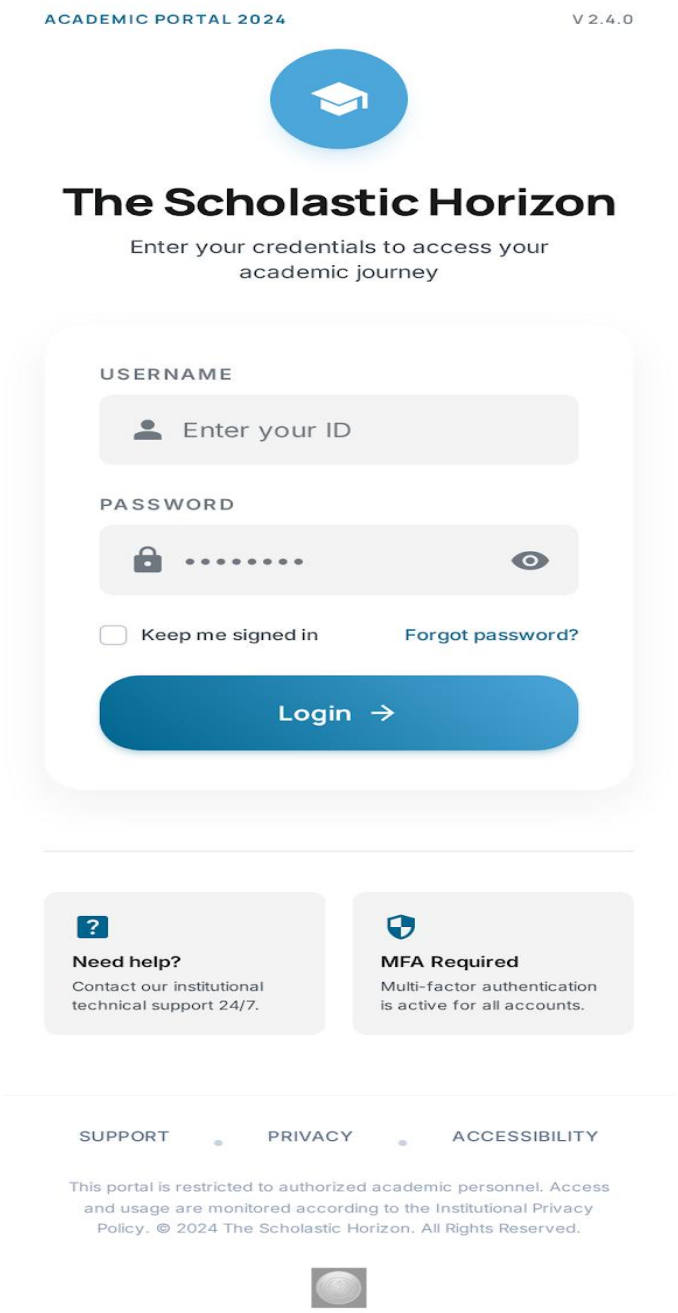
- Dark background with light text
- High contrast design
- Suitable for low-light usage

3. Gradient Theme

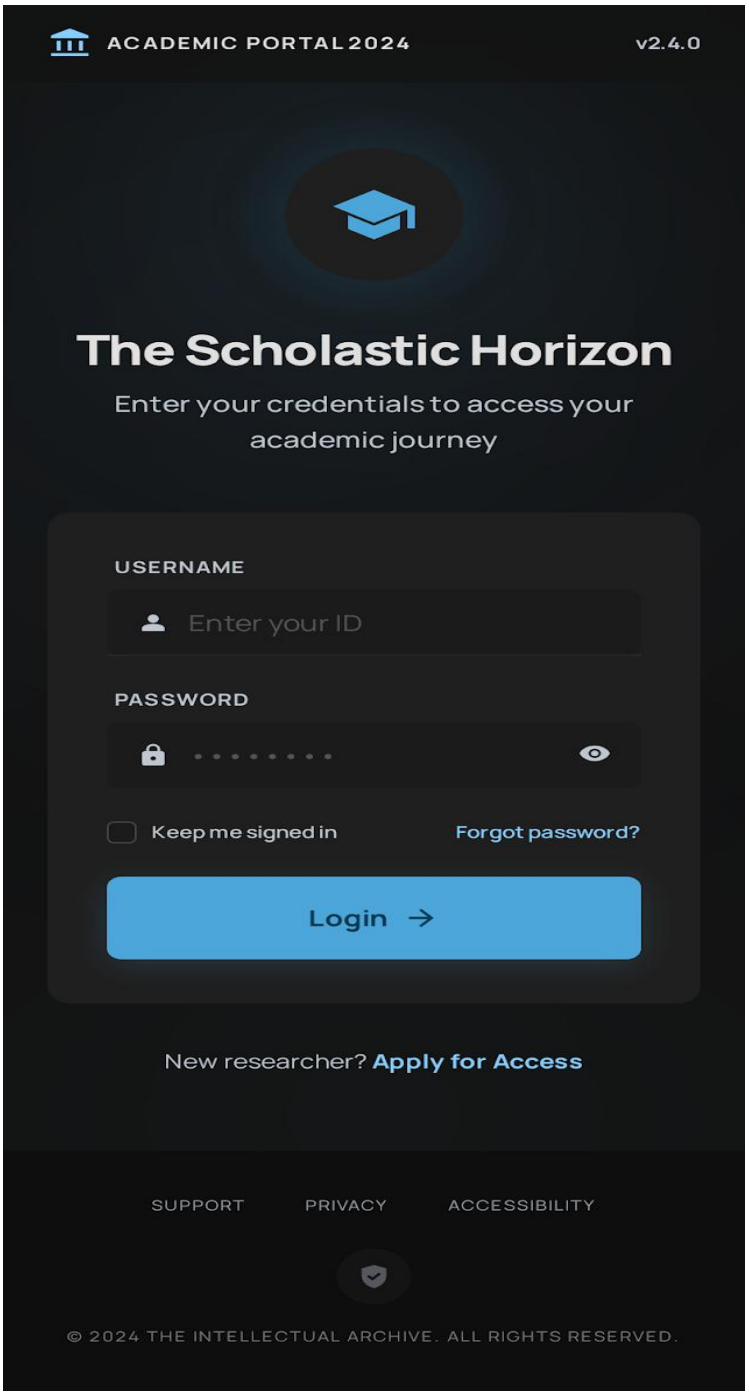
- Blue to purple gradient background
- Glassmorphism style UI
- Modern and visually attractive design

OUTPUT

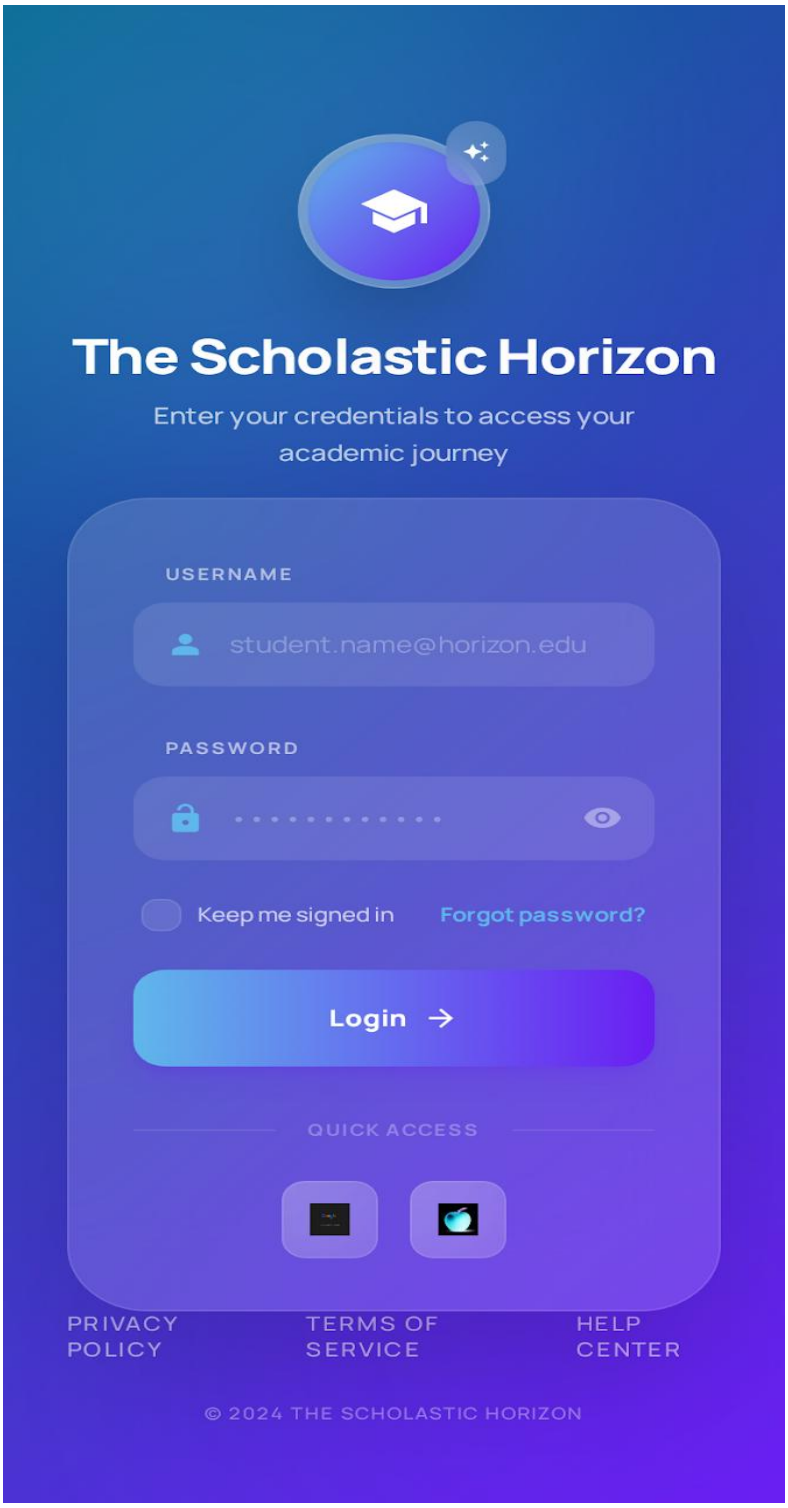
Light Theme UI



Dark Theme UI



Gradient Theme UI



FEEDBACK ANALYSIS

- Feedback was collected using Google Forms.
- Users evaluated based on:
    - Appearance
    - Ease of use
    - Readability

Observations:

- Most users preferred the **Light Theme** for clarity.
- Dark theme was comfortable for night usage.
- Gradient theme was rated most attractive.

RESULT

The experiment was successfully completed by designing multiple app layouts and color schemes using GIMP. Based on user feedback, the most suitable design was identified and refined for better usability and aesthetics.

CONCLUSION

- UI design plays a crucial role in user experience.
- Color schemes affect readability and user comfort.
- User feedback helps improve interface quality.
